

With Casa Systems' Wireless LAN Solutions, Guests Will Feel Like They Never Left Home

Easy access to fast and dependable Wi-Fi while relaxing in front of the TV can help guests feel at home, improve their satisfaction, and increase recommendations and return visits. Providers of the optimum guest Wi-Fi experience also deserve a little respite from rising costs and complex management. And, both guests and their hosts can benefit from Wi-Fi offerings that go beyond traditional one-size-fits-all approaches. Casa Systems' Wireless LAN (WLAN) solutions are optimally suited to meet current and emerging Wi-Fi demands in hospitality environments.

Casa's WLAN solutions use existing infrastructure to deliver Wi-Fi services via qualified 3rd party access points giving the service provider greater visibility and control over both the Wi-Fi and fixed broadband experience from any location. Deployment is simplified with the Casa approach, so that hospitality providers don't have to worry about lengthy and unsightly construction impacting the guest experience.

To ensure all guests are satisfied with their Wi-Fi experience, Casa offers traffic conditioning and metering functions, which enable differentiated Wi-Fi offerings and increase monetization opportunities. Equipped with powerful radio resource management and SON software, Casa's WLAN lets the hospitality provider rest as easily as their guests.

Integration of Wi-Fi and DOCSIS reduces cost, enables insight to entire guest communication experience

Works with a variety of access points

Centralized remote management for control from any location

Advanced SON features simplify AP provisioning and management

Radio Resource Management captures network data and uses it to dynamically manage QoE based on the service provider's parameters

Separation of data and control plane allows optimum scaling flexibility; multiple sizes of edge servers and cloud based core server enable a variety of deployment models

Leverage existing infrastructure for more rapid, less intrusive deployment

Casa Systems' Wi-Fi for Hospitality

Easy Deployment

- Multiple sizes of WES (WLAN Edge Servers) (ME1X, C100G, C40G)
- Deploy WES and / or WCS on or off-premise
- Variety of APs supported
- Use existing CMTS, in-building coax
- Cloud based WCS (WLAN Core Server)

Powerful Management

- Single pane of glass for visibility into and management of control and data plane services
- SON for simplified multi-vendor AP provisioning and management
- Comprehensive network data collection
- Remote diagnosis and trouble-shooting

Flexible Deployment

- Built to scale control and data planes separately
- Isolated data paths for multiple networks
- Smooth scaling of APs with unique SON features

About Casa Systems, Inc.

Casa Systems has defined a new category of software-centric Ultra Broadband network edge devices that allow cable and mobile service providers to intelligently and cost-effectively scale their networks to meet gigabit demands today. Based on disruptive technologies to target the growing market opportunity in interactive digital video and broadband IP services, Casa Systems provides market-leading, DOCSIS 3.1-enabled CCAP and CMTS products, universal EdgeQAM and intelligent video processing solutions for broadcast and unicast services, as well as MobileEdge small cell and managed Wi-Fi solutions. #UltraBroadband #GigabitSpeeds
