

# Company Overview

Casa Systems is a leading provider of fixed, mobile, optical and Wi-Fi network solutions for **ultra broadband services**, which require over 1Gbps throughput today and will require 10Gbps or more within the next decade. We are focused on and passionate about enabling these services, regardless of access network type.

## The shift toward ultra broadband

Ultra broadband is more than ultra fast. We firmly believe – and our long-term strategic customers agree – that networks will converge, grow more dense, be more intelligent, and offer a TCO that allows service providers to continue to invest in solutions for an ultra broadband world. Ultra broadband services will require ultra-fast, ultra-secure, and ultra-reliable connections. Those connections need to be ubiquitous and work across any access type. And, the applications for ultra broadband will be increasingly unique, leveraging programmable network parameters that enhance QoE for subscribers, networks and applications.

In addition to fixed broadband services, including DOCSIS 3.0/3.1, CCAP and Distributed Access, Casa's ultra broadband portfolio includes mobile edge computing solutions, licensed small cells, transport security and Wi-Fi. With our solutions, service providers can offer rich customer experiences that are fueled by high-performance broadband, span seamlessly across multiple access networks, and are defined and optimized using software intelligence.

## Transformation through innovation

Leading transformation is nothing new for Casa Systems. Since 2003, we've been defined and differentiated by an innate innovative spirit. Every time there has been a transformational shift in the cable industry, we have been able to develop leading-edge technologies and have been first to market to deliver innovative solutions that address our customers' problems. Our expertise in disruptive technologies is now driving the company's vision for converged ultra broadband solutions. Casa Systems' fixed broadband infrastructure offerings incorporate RF engineering, high-density access aggregation, and extreme subscriber and session management capabilities – all highly applicable to mobile and Wi-Fi networks, as well.

Of course, this innovation is driven by our close partnerships with our customers – we listen to their needs and challenges and then apply our deep technological expertise and engineering resources to address them. We are partnered with over 350 service providers around the globe, improving their competitiveness in industries that continue to face rising end-user and market demands.

Our agile development approach allows us to respond quickly to our customers' needs – and, in turn, gives them access to the capabilities, functionality and performance they need to deliver new services more quickly, improve subscriber experience, and maintain the competitive edge that is so critical to their own profitability.

## Quick Facts

- Founded in 2003
- Headquartered in Andover, Massachusetts, USA
- More than 600 employees worldwide
- Serving MNOs, MVNOs, MSOs and fixed service providers
- Recent accolades include:
  - BTR Diamond Technology Review Innovation Award for Distributed Access
  - Deloitte and Touche Fast 500: 9th fastest growing communications company in North America
  - Light Reading Leading Lights: Most innovative NFV Strategy Finalist 2016 Product – Cable

This customer-focused approach has served as the foundation for some of our greatest innovations – and is now enabling us to lead the ultra broadband movement. Our spirit, combined with technology excellence and an experienced leadership team raised within the networking and telecom industry, puts us in prime position to disrupt the market. And we are prepared to do just that.

## Uniquely qualified to help customers capitalize

What makes Casa Systems the ideal vendor to lead the evolution to ultra broadband? Our combination of speed plus quality truly differentiates us – these are rare in cable and telecom. Our structure, business model and laser-like focus on technology and innovation make Casa Systems uniquely qualified to bring ultra broadband to the cable and telecom markets. This, along with an unmatched commitment to our customers, allows us to quickly respond to their needs – which is critical when issues or questions relate to the network infrastructure on which they run their businesses.

For companies that are innovating and transforming the way an industry operates, response time is crucial. Only a company structured with agility and focus in mind can deliver that responsiveness. **And that's Casa Systems. We're focused on one thing: delivering ultra broadband solutions that are designed to meet the exacting needs of our customers and empower them to respond to market demands today and tomorrow.**

---

Casa Systems is a leading provider of fixed, mobile and Wi-Fi network solutions for ultra-broadband services. As the original supplier of commercially deployed CCAP systems that deliver voice, video and data over a single port, Casa continues a tradition of bringing leading edge solutions to hundreds of service providers around the world.
