Casa Systems Recognized as “Hot Tech Innovator” by ABI Research

Casa’s virtualized ultra-broadband edge platform and small cell mobility offerings identified as key solutions for the deployment of 5G and the ultra broadband era

ANDOVER, Mass., July 12, 2016 – Casa Systems, a worldwide leader in next-generation ultra-broadband access technology, has been named by ABI Research as a 2016 “Hot Tech Innovator” for its [suite of mobility solutions](#) – Axyom™, its virtualized ultra-broadband edge platform, and Apex, its multi-standard, low-power small cell solution. The report recognizes young and agile companies at the forefront of the next wave of technology innovation.

Casa Systems’ Axyom provides all of the access and core network functions service providers need to enable a variety of ultra-broadband mobile and Wi-Fi services. Deployable on-premise, at the network edge or at a centralized location, Axyom features a suite of virtual network functions designed to help providers simplify their access networks with a single software platform that provides security, management tools and the ability to provide end users with the highest quality experience. Casa’s small cell solution, Apex, integrates 3G and LTE access with virtualized security and HNB/HeNB gateways, SON, HMS/HeMS and backhaul to deliver a high performance, highly secure heterogeneous network.

In the report, ABI Research states, “The combination of Axyom and Apex and these systems’ ability to connect to Ethernet or DOCSIS for backhaul means that they will have immediate appeal to MNOs and MSOs entering the in-building wireless market. As a Tier 1 supplier, Casa leveraged its expertise in carrier-grade cable access to deliver these solutions. Early success in interoperability trials and pick-up by the MNO/MSO community will be among the keys to their success.”

“While it is easy to spot the tech companies that cause disruption, the true transformative trends and companies driving those changes are harder to see,” says Stuart Carlaw, managing partner and chief research officer at ABI Research. “Our analysts identified the companies that should be on the radar of all market observers. They should be considered pioneers, market makers, threats, disruptors, acquisition targets and transformation agents. Fundamentally, they represent some of the brightest value creators operating today.”

“We are honored to be recognized by ABI Research and included among other market disrupters at the forefront of technology innovation today,” said Jerry Guo, CEO, Casa Systems. “This recognition underscores the interest we’re seeing from service providers who are looking to optimize the performance of their wireless access networks and deliver new revenue streams today while laying the foundation to meet the demands of the 5G era.”

About Casa Systems, Inc.

Casa Systems has defined a new category of software-centric Ultra Broadband network edge devices that allow cable and mobile service providers to intelligently and cost-effectively scale their networks to meet gigabit demands today. Based on disruptive technologies to target the growing market opportunity in interactive digital video and broadband IP services, Casa Systems provides market-leading, DOCSIS[®] 3.1-enabled CCAP and CMTS products, universal EdgeQAM and intelligent video processing solutions for broadcast and unicast services, managed Wi-Fi solutions as well as the Apex multi-standard small cell and Axyom mobile edge computing platform. #UltraBroadband #GigabitSpeeds #DOCSIS3.1 For more information, please visit us at <http://www.casa-systems.com>.
